Char c = 'a'; ← Storing 1 character.

Now storing an array of characters.) more than 1 characters!

Char ch[5] = {'J', 'e', 'n', 'e', 'k'};

↓

(Character array)

char ch[6] = "Jenny";

This is a constant. 1 extra space is used to store null character \0.

Jenny \0 = [6] ✓

Char ch[5] = "Jenny"; (ERROR)

Char ch[] = "Jenny lectures";

✓ Automatically Initialses.

Outputting in Strings.

→ Stop loop until you see '\0'
